Success Story

Electronic storage for Rosenergoatom¹

Electronic storage project for Rosenergoatom (VNIIAES) was completed in october 2005. The project was implemented by VO Avtopromimport, IRP Technology's methods and technologies were used in the course of project implementation.

As a result, electronic storage software was put into trial operation, and a part of VNIIAES documents were converted in the electronic form. Taking into account the results of trial operation it is planned to further develop the system both in terms of integration with other applications, and extension of information resources.

Solution advantages:

- The solution provides controlled user access to storage documents from any point by means of the standard WEB interface from any platform.
- The software does not require any configuration by users.
- Server component is easily scalable and attached with customer's IT infrastructure.

Rosenergoatom's project goal was to create electronic storage of legal and design documents for repair of nuclear plant equipment. Since many paper documents were presented in a single copy, simultaneous work of multiple users with one and the same document was extremely complicated. Similar problem was faced if it was necessary to access documents from nuclear plants.

Solution: to meet VNIIAES requirements software integration and document management system of VO "Avtopromimport" was adopted. As a result, "Electronic Storage of Legal and Design Documents for Repair of Nuclear Plant Equipment" software has been developed.

In addition to electronic storage functions, this software enables document exchange between users and work discipline control.

About company IRP Technology and product IRP FrameDoc

At IRP Technology, we help you to succeed by taking advantage of advanced IT.

IRP Technology was established by Rechner Und Peripherie Virtriebs GMBH (RuP) in 2004. Gerd Lutz is president of IRP Technology. RuP has been successful at international IT market over 15 years.

VO Avtopromimport (www.avtopromimport.ru) is strategic partner of IRP Technology in Russia.

IRP FrameDoc was designed to provide both paper and electronic document management, electronic archiving, and work discipline control.

Advantages of IRP FrameDoc (<http://www.irptec.com/product-framedoc.php>):

- IRP FrameDoc was desine on basis of integration platform
 - Easily integrated with technical periphery (search engines, electronic digital signature, bulk upload, storage etc.)
 - Easily integrated with other applications (accounting, HR etc.)
- WEB-based technologies (web access, distributed application, economically efficient ownership due to "thin client")
- Simple intuitive user/ administrator interface (quick learning, quick start of exploiting the system)
